Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19, drawn to gas flow controller comprising first and second main valves connected in series and first and second servo valves, classified in class 137, subclass 613.
- II. Claims 20-22, drawn to a gas flow controller comprising a servo valve coupled to control a differential pressure across a diaphragm in a first main valve, classified in class 137, subclass 488.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the first servo valve arrangement of the combination does not require the servo valve being coupled to the second main valve to selectively flow gas from the first main valve to the second main valve to close the second main valve required of the subcombination. The subcombination does not require the series arrangement of the first and second main valves of the combination.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
